If you want to make your Roku more useful, [Evaluation of drug effect in the emergency department]. In the emergency department (ED), it is important to evaluate the patient's severity, especially with regards to the effects of drugs that are administered. We investigated the usefulness of the Kobayashi Severity of Illness Scale (KSIS) which assesses four factors (i.e., vital signs, consciousness, treatment, and other patient data). We also investigated the usefulness of KSIS-ED, a version of KSIS that contains additional sections for patients who have received drug therapy at the ED. We developed this scale in cooperation with 26 medical doctors at our hospital. This scale was self-administered by 73 patients who visited the ED, and its usefulness was evaluated. The KSIS-ED was also evaluated for the 26 medical doctors who developed this scale. The KSIS-ED showed good

inter-rater reliability (intra-class correlation coefficient [ICC] = 0.72-1.00). The KSIS-ED was useful for evaluating drug effect in the ED. This scale may be used for evaluation of patients' physical conditions, emergency physicians' assessment of the patients, and for assisting the team in decision-making, especially in situations where intravenous therapy may be indicated./\* \* Copyright (c) Microsoft Corporation.
